

TDM5 - How To install the TDM5 LG
webOS player

Introduction

TDM5 supports all kinds of devices, this can be a Sony Bravia, Philips D-Line, Samsung display, LG webOS display or an Android/PC player. This manual explains how TDM5 can be configured for the LG webOS display.

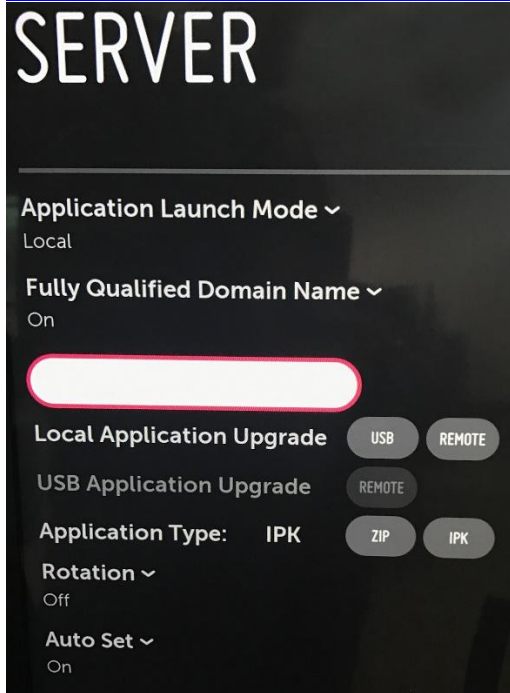

Requirements

If you want to install and use the TDM5 application on a LG webOS display you need to meet the following requirements:

- Display with webOS
- Have an active player license within your TDM5 account.
- Have a network connection

How To install the TDM5 LG webOS player

1. Using the gear icon on the remote go to Ez Setting > SI Server Setting.
2. Select 'SI Server Setting'.
3. Enable Fully Qualified Domain Name and set the download URL to:
<https://tdm5.tdmsignage.com/download/webos>

4. Set 'Application Launch Mode' to 'Local'.
5. Set 'Application Type' to 'IPK'.
6. Set 'Local Application Upgrade' to 'Remote' and select 'Confirm'.
7. Reboot the device using the stand-by button on the remote, the application should update and start automatically.
